

ABSTRACT

The rotor blade for a mechanical trowel, such as a concrete polisher, comprises a blade arm (20), a spacer bar (22), and a blade plate (24). The spacer bar (22) is not integral with the blade plate (24). Through-bolts (30) with nuts (44) run through unthreaded through-holes (32, 34, 36) formed in the plate (24), the spacer bar (22), and the blade arm (20). After the removal of the bolts (30), the plate (24) is separated from the spacer bar (22).
